**Multi-Objective Optimization in Computer Networks Using Metaheuristics** Yezid Donoso, Ramon Fabregat

Metaheuristics are widely used to solve important practical combinatorial optimization problems. Many new multicast applications emerging from the Internet-such as TV over the Internet, radio over the Internet, and multipoint video streaming-require reduced bandwidth consumption, end-to-end delay, and packet loss ratio. It is necessary to design and to provide for these kinds of applications as well as for those resources necessary for functionality.

Multi-Objective Optimization in Computer Networks Using Metaheuristics provides a solution to the multi-objective problem in routing computer networks. It analyzes layer 3 (IP), layer 2 (MPLS), and layer 1 (GMPLS and wireless functions). In particular, it assesses basic optimization concepts, as well as several techniques and algorithms for the search of minimals; examines the basic multi-objective optimization concepts and the way to solve them through traditional techniques and through several metaheuristics; and demonstrates how to analytically model the computer networks presented within the text.

The book then focuses on the multi-objective models in computer networks, optical networks, and wireless networks and the applied way they can be solved. This resource also contains annexes that present the source code to solve the mathematical model problems present in the book through solvers and source codes programmed in C language, which solve some of the multi-objective optimization problems presented in the book.

### **From reader reviews:**

#### **Traci Daniels:**

Precisely why? Because this Multi-Objective Optimization in Computer Networks Using Metaheuristics is an unordinary book that the inside of the publication waiting for you to snap it but latter it will surprise you with the secret that inside. Reading this book close to it was fantastic author who also write the book in such remarkable way makes the content inside easier to understand, entertaining technique but still convey the meaning completely. So , it is good for you for not hesitating having this ever again or you going to regret it. This excellent book will give you a lot of benefits than the other book possess such as help improving your proficiency and your critical thinking technique. So , still want to hold up having that book? If I have been you I will go to the e-book store hurriedly.

#### **Betty Abbott:**

Do you one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Try and pick one book that you never know the inside because don't determine book by its deal with may doesn't work here is difficult job because you are frightened that the inside maybe not as fantastic as in the outside appear likes. Maybe you answer might be Multi-Objective Optimization in Computer Networks Using Metaheuristics why because the great cover that make you consider about the content will not disappoint you actually. The inside or content is definitely fantastic as the outside or maybe cover. Your reading 6th sense will directly direct you to pick up this book.

#### **Florence Nguyen:**

As we know that book is essential thing to add our expertise for everything. By a reserve we can know everything we would like. A book is a set of written, printed, illustrated or perhaps blank sheet. Every year had been exactly added. This publication Multi-Objective Optimization in Computer Networks Using Metaheuristics was filled regarding science. Spend your free time to add your knowledge about your science competence. Some people has different feel when they reading a book. If you know how big benefit of a book, you can feel enjoy to read a guide. In the modern era like currently, many ways to get book that you simply wanted.

#### **Mark Smith:**

As a pupil exactly feel bored to help reading. If their teacher inquired them to go to the library or even make summary for some e-book, they are complained. Just tiny students that has reading's spirit or real their leisure activity. They just do what the educator want, like asked to the library. They go to there but nothing reading critically. Any students feel that reading is not important, boring as well as can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this era, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. So , this Multi-Objective Optimization in Computer Networks Using Metaheuristics can make you really feel more

interested to read.
