Adsorption and Transport at the Nanoscale

Adsorption and Transport at the Nanoscale

Nanoporous materials are used widely in industry as adsorbents, particularly for applications where selective adsorption of one fluid component from a mixture is important. Nanoscale structures are of increasing interest for micro- and nanofluidic devices. Computational methods have an important role to play in characterizing, understanding, and designing such materials. Adsorption and Transport at the Nanoscale gives a survey of computational methods and their applications in this burgeoning field.

Beginning with an overview of adsorption and transport phenomena at the nanoscale, this book details several important simulation techniques for characterization and modeling of nanomaterials and surfaces. Expert contributors from Europe, Asia, and the US discuss topics including Monte Carlo simulation for modeling gas adsorption; experimental and simulation studies of aniline in activated carbon fibers; molecular simulation of templated mesoporous materials and adsorption of guest molecules in zeolitic materials; as well as computer simulation of isothermal mass transport in graphitic slit pores. These studies elucidate the chemical and physical phenomena while demonstrating how to perform the simulation techniques, illustrating their advantages, drawbacks, and limitations.

A survey of recent progress in numerical simulation of nanomaterials, Adsorption and Transport at the Nanoscale explains the central role of molecular simulation in characterizing and designing novel materials and devices.

From reader reviews:

Antoine Dejean:

The feeling that you get from Adsorption and Transport at the Nanoscale is the more deep you searching the information that hide within the words the more you get serious about reading it. It doesn't mean that this book is hard to understand but Adsorption and Transport at the Nanoscale giving you joy feeling of reading. The article writer conveys their point in particular way that can be understood by anyone who read that because the author of this publication is well-known enough. This kind of book also makes your own personal vocabulary increase well. Therefore it is easy to understand then can go to you, both in printed or e-book style are available. We highly recommend you for having that Adsorption and Transport at the Nanoscale instantly.

Terry Carr:

Reading a e-book can be one of a lot of task that everyone in the world loves. Do you like reading book therefore. There are a lot of reasons why people like it. First reading a e-book will give you a lot of new information. When you read a e-book you will get new information because book is one of a number of ways to share the information or even their idea. Second, looking at a book will make you more imaginative. When you reading a book especially tale fantasy book the author will bring one to imagine the story how the people do it anything. Third, you could share your knowledge to some others. When you read this Adsorption and Transport at the Nanoscale, you could tells your family, friends and also soon about yours guide. Your knowledge can inspire others, make them reading a e-book.

Lawrence Caulfield:

A lot of e-book has printed but it takes a different approach. You can get it by world wide web on social media. You can choose the top book for you, science, comic, novel, or whatever by simply searching from it. It is referred to as of book Adsorption and Transport at the Nanoscale. You'll be able to your knowledge by it. Without leaving the printed book, it can add your knowledge and make you happier to read. It is most significant that, you must aware about e-book. It can bring you from one destination to other place.

Justin Campbell:

What is your hobby? Have you heard which question when you got learners? We believe that that query was given by teacher with their students. Many kinds of hobby, All people has different hobby. Therefore you know that little person just like reading or as reading through become their hobby. You need to know that reading is very important along with book as to be the thing. Book is important thing to increase you knowledge, except your own personal teacher or lecturer. You will find good news or update concerning something by book. Different categories of books that can you take to be your object. One of them is niagra Adsorption and Transport at the Nanoscale.
