Exercises in Architecture: Learning to Think as an Architect Simon Unwin

Architecture is a doing word. You can learn a great deal about the workings of architecture through analysing examples but a fuller understanding of its powers and potential comes through practice, by trying to do it...

This book offers student architects a series of exercises that will develop their capacity for doing architecture. *Exercises in Architecture* builds on and supplements the methodology for architectural analysis presented in the author's previous book *Analysing Architecture* (third edition, Routledge, 2009) and demonstrated in his *Twenty Buildings Every Architect Should Understand* (Routledge, 2010). The three books taken together deal with the three aspects of learning: description, analysis of examples, and practice.

The book offers twelve exercises, each divided into a short series of tasks aimed at developing a particular theme or area of architectural capacity. The exercises deal with themes such as place-making, learning through drawing, framing, light, , uses of geometry, stage setting, eliciting emotional responses, the genetics of detail and so forth.
