Polyhedral and Algebraic Methods in Computational Geometry (Universitext)

Michael Joswig, Thorsten Theobald

Polyhedral and Algebraic Methods in Computational Geometry (Universitext) Michael Joswig, Thorsten Theobald

Polyhedral and Algebraic Methods in Computational Geometry provides a thorough introduction into algorithmic geometry and its applications. It presents its primary topics from the viewpoints of discrete, convex and elementary algebraic geometry.

The first part of the book studies classical problems and techniques that refer to polyhedral structures. The authors include a study on algorithms for computing convex hulls as well as the construction of Voronoi diagrams and Delone triangulations.

The second part of the book develops the primary concepts of (non-linear) computational algebraic geometry. Here, the book looks at Gröbner bases and solving systems of polynomial equations. The theory is illustrated by applications in computer graphics, curve reconstruction and robotics.

Throughout the book, interconnections between computational geometry and other disciplines (such as algebraic geometry, optimization and numerical mathematics) are established.

Polyhedral and Algebraic Methods in Computational Geometry is directed towards advanced undergraduates in mathematics and computer science, as well as towards engineering students who are interested in the applications of computational geometry.

From reader reviews:

Minerva Gagliano:

What do you with regards to book? It is not important along with you? Or just adding material when you really need something to explain what your own problem? How about your spare time? Or are you busy individual? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have free time? What did you do? All people has many questions above. They should answer that question simply because just their can do in which. It said that about book. Book is familiar in each person. Yes, it is right. Because start from on kindergarten until university need this particular Polyhedral and Algebraic Methods in Computational Geometry (Universitext) to read.

Shane Bodine:

Reading a book can be one of a lot of exercise that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people fantastic. First reading a publication will give you a lot of new info. When you read a reserve you will get new information because book is one of numerous ways to share the information or their idea. Second, examining a book will make you actually more imaginative. When you looking at a book especially hype book the author will bring you to definitely imagine the story how the figures do it anything. Third, it is possible to share your knowledge to other people. When you read this Polyhedral and Algebraic Methods in Computational Geometry (Universitext), you may tells your family, friends along with soon about yours reserve. Your knowledge can inspire the mediocre, make them reading a guide.

William Johnson:

Many people spending their time by playing outside along with friends, fun activity with family or just watching TV 24 hours a day. You can have new activity to pay your whole day by reading a book. Ugh, ya think reading a book really can hard because you have to accept the book everywhere? It ok you can have the e-book, having everywhere you want in your Cell phone. Like Polyhedral and Algebraic Methods in Computational Geometry (Universitext) which is obtaining the e-book version. So , why not try out this book? Let's observe.

Joseph Cole:

This Polyhedral and Algebraic Methods in Computational Geometry (Universitext) is brand new way for you who has curiosity to look for some information since it relief your hunger details. Getting deeper you into it getting knowledge more you know otherwise you who still having bit of digest in reading this Polyhedral and Algebraic Methods in Computational Geometry (Universitext) can be the light food for you personally because the information inside this kind of book is easy to get by simply anyone. These books create itself in the form which can be reachable by anyone, that's why I mean in the e-book form. People who think that in reserve form make them feel sleepy even dizzy this publication is the answer. So there is no in reading a

book especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss this! Just read this e-book style for your better life and knowledge.
