The embodied mind: Sensory-motor experience, cognition and linguistic meaning as continuum

Dominik Buchmüller

Seminar paper from the year 2007 in the subject American Studies - Linguistics, grade: 1,3, University of Bonn (Institut für Anglistik, Amerikanistik und Keltologie), course: Cognitive Linguistics, 20 entries in the bibliography, language: English, abstract: The 2.000 year old dichotomies of mind versus body and inner self versus external world are still ubiquitous in Western spontaneous philosophy (in Gramsci's sense), science and education. However, they cannot be empirically testified. On the contrary, more than thirty years of rich evidence from interdisciplinary cognitive science leave no doubt that the human mind is embodied in our entire organism and embedded in the world.

The nature of our everyday sensory (i.e. visual, auditory, haptic, olfactory, gustatory, vestibular) and motoric experience, which is interactive and could be described as "organism-environment co-ordination" (Johnson & Rohrer 10), constitutes our "species-specific view of the world" (Evans & Green 45). Moreover it serves as information on the "opportunities and costs of acting in the environment" (Proffitt 110) and thereby at least indirectly (i.e. via our individual conceptual structures derived from embodied experience of our natural and socio-cultural environment) guides our (linguistic) behaviour. Perception (i.e. processing of information obtained by our sensory system), cognition (i.e. conceptual representation of perceptual input and off-line employment of the concepts), consciousness (i.e. confluence of distinct phenomena such as first-person-perspective and volition) and action do not form clearly divided systems of brain activity but function as continuum of ongoing interaction between our body, mind and ambiance. They are "not merely contingently in individuals; they have also evolved together." (Rosch & Thompson etc. 173)

This paper will sum up the most fundamental findings from the branches of cognitive linguistics, psychology and neuroscience, giving account of the neural and mental structures and processes that link all (in equal measure physical) aspects of our existence. More precisely we are going to see how mechanisms of thought such as image schemas, conceptual domains and even metaphors are derived from bodily experience and how they are embodied themselves in the brain structure. Metaphor in particular will be looked at as a conceptual rather than purely linguistic device that structures our world view (including our political and scientific stance, cf. Lakoff Why the embodied... 33), language and social action in place of some universal, disembodied reason (which is a Rationalist illusion). Further we will be concerned with embodied language understanding on the basis of neural computation over so-called Perceptual Symbol Systems. Finally the reader will learn about the Neo-Whorfian notion of language as a "shaper of thought" (Evans & Green 98) and why it does not contradict the Embodied Realist model of semantic structure encoding conceptual and ultimately perceptual structure.

From reader reviews:

Robert Warden:

Book will be written, printed, or illustrated for everything. You can learn everything you want by a e-book. Book has a different type. As you may know that book is important factor to bring us around the world. Beside that you can your reading expertise was fluently. A book The embodied mind: Sensory-motor experience, cognition and linguistic meaning as continuum will make you to become smarter. You can feel far more confidence if you can know about every little thing. But some of you think that open or reading a new book make you bored. It is not make you fun. Why they might be thought like that? Have you trying to find best book or acceptable book with you?

Arthur Sanchez:

As people who live in the modest era should be revise about what going on or information even knowledge to make these keep up with the era and that is always change and move ahead. Some of you maybe will certainly update themselves by examining books. It is a good choice for yourself but the problems coming to an individual is you don't know which you should start with. This The embodied mind: Sensory-motor experience, cognition and linguistic meaning as continuum is our recommendation so you keep up with the world. Why, as this book serves what you want and wish in this era.

Aracely Schneider:

Often the book The embodied mind: Sensory-motor experience, cognition and linguistic meaning as continuum has a lot of knowledge on it. So when you read this book you can get a lot of benefit. The book was written by the very famous author. Tom makes some research before write this book. This book very easy to read you can obtain the point easily after scanning this book.

Kenneth Leishman:

You may get this The embodied mind: Sensory-motor experience, cognition and linguistic meaning as continuum by go to the bookstore or Mall. Just viewing or reviewing it may to be your solve difficulty if you get difficulties for the knowledge. Kinds of this publication are various. Not only by means of written or printed but can you enjoy this book through e-book. In the modern era similar to now, you just looking from your mobile phone and searching what your problem. Right now, choose your personal ways to get more information about your e-book. It is most important to arrange yourself to make your knowledge are still update. Let's try to choose appropriate ways for you.
