Human Performance Models for Computer-Aided Engineering Jerome I. Elkind, Stuart K. Card, Julian Hochberg, Bev Huey
Human Performance Models for Computer-Aided Engineering is a collection of papers that deals with the relationship between scientific theories of human performance and practical engineering. This collection describes the emergence of a scientific engineering paradigm that uses computational theories in computational design aids. This book also considers computational human factors such as human performance models and their application in computer-based engineering designs. This text then presents applications of these models to some helicopter flight problems. This book also explains the four requirements in programming a computer-based model of the sensory performance of a pilot as 1) prediction capability; 2) measurement capability; 3) provision of compatible computer algorithms; and 4) image driven. This collection also describes cognitive structures-aspects of the human information processing system. This text then discusses resource management and time-sharing issues that is related to competition of scarce resources, which can be predictive of the quality of information processing. This book also describes other modeling scenarios such as those predicting human errors, decision making, and shape modeling. This text can prove valuable for computer programmers, engineers, physicists, and research scientists dealing with psychophysics.

From reader reviews:

Pam Wright:

Now a day individuals who Living in the era where everything reachable by match the internet and the resources within it can be true or not call for people to be aware of each info they get. How individuals to be smart in getting any information nowadays? Of course the solution is reading a book. Reading a book can help men and women out of this uncertainty Information mainly this Human Performance Models for Computer-Aided Engineering book as this book offers you rich info and knowledge. Of course the details in this book hundred % guarantees there is no doubt in it you know.

Jerrod Spicher:

This book untitled Human Performance Models for Computer-Aided Engineering to be one of several books this best seller in this year, this is because when you read this book you can get a lot of benefit onto it. You will easily to buy this kind of book in the book store or you can order it by using online. The publisher with this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Smart phone. So there is no reason for your requirements to past this book from your list.

Debra Davis:

The book untitled Human Performance Models for Computer-Aided Engineering contain a lot of information on the idea. The writer explains the woman idea with easy technique. The language is very straightforward all the people, so do not worry, you can easy to read that. The book was authored by famous author. The author will take you in the new era of literary works. You can easily read this book because you can please read on your smart phone, or product, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can open up their official web-site as well as order it. Have a nice study.

Florence Davis:

This Human Performance Models for Computer-Aided Engineering is brand-new way for you who has interest to look for some information since it relief your hunger of information. Getting deeper you upon it getting knowledge more you know or perhaps you who still having small amount of digest in reading this Human Performance Models for Computer-Aided Engineering can be the light food for you because the information inside this particular book is easy to get through anyone. These books produce itself in the form which is reachable by anyone, yeah I mean in the e-book form. People who think that in e-book form make them feel sleepy even dizzy this guide is the answer. So there is not any in reading a reserve especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss the idea! Just read this e-book variety for your better life and also knowledge.
