Systems Science: Methodological Approaches (Advances in Systems Science and Engineering (ASSE))

Yi Lin, Xiaojun Duan, Chengli Zhao, Li Da Xu

By making use of the principles of systems science, the scientific community can explain many complicated matters of the world and shed new light on unsettled problems. Each real science has its own particular methodology for not only qualitative but also quantitative analyses, so it is important to understand the organic whole of systems research with operable mathematical methods. **Systems Science: Methodological Approaches** presents a mathematical explanation of systems science, giving readers a complete technical formulation of different systemic laws. It enables them to use a unified methodology to attack different problems that are hard, if not impossible, for modern science to handle.

Following a brief history of systems science, the book explores:

- Basic concepts, characteristics, properties, and classifications of general systems
- Nonlinear systems dynamics and the theory of catastrophe
- Dissipative structures and synergistics
- Studies of chaos, including logistic mapping, phase space reconstruction, Lyapunov exponents, and chaos of general single relation systems
- Different aspects and concepts of fractals, including a presentation of L systems analysis and design
- Complex systems and complexity, with a discussion of how the phenomena of "three" and complexity are related, and how various cellular automata can be constructed to generate useful simulations and figurative patterns
- Complex adaptive systems and open complex giant systems, with introduction of the yoyo model and practical applications
- Complex networks and related concepts and methods

The book concludes with several case studies that demonstrate how various concepts and the logic of systems can be practically applied to resolve real-life problems, such as the prediction of natural disasters. The book will be useful in directing future research and applications of systems science on a commonly accepted platform and playground.

From reader reviews:

Eddie Bussell:

Reading a reserve tends to be new life style with this era globalization. With examining you can get a lot of information which will give you benefit in your life. Along with book everyone in this world may share their idea. Books can also inspire a lot of people. A lot of author can inspire their very own reader with their story or their experience. Not only the storyline that share in the guides. But also they write about the data about something that you need example of this. How to get the good score toefl, or how to teach children, there are many kinds of book which exist now. The authors on this planet always try to improve their expertise in writing, they also doing some research before they write for their book. One of them is this Systems Science: Methodological Approaches (Advances in Systems Science and Engineering (ASSE)).

Paul Hardy:

People live in this new morning of lifestyle always try and must have the extra time or they will get wide range of stress from both everyday life and work. So , once we ask do people have free time, we will say absolutely of course. People is human not really a huge robot. Then we inquire again, what kind of activity are there when the spare time coming to you actually of course your answer will probably unlimited right. Then do you try this one, reading publications. It can be your alternative inside spending your spare time, the book you have read is Systems Science: Methodological Approaches (Advances in Systems Science and Engineering (ASSE)).

Samuel Ware:

Playing with family in the park, coming to see the sea world or hanging out with buddies is thing that usually you may have done when you have spare time, in that case why you don't try factor that really opposite from that. Just one activity that make you not sense tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Systems Science: Methodological Approaches (Advances in Systems Science and Engineering (ASSE)), you could enjoy both. It is great combination right, you still want to miss it? What kind of hang-out type is it? Oh come on its mind hangout guys. What? Still don't have it, oh come on its named reading friends.

James Valenzuela:

Your reading 6th sense will not betray a person, why because this Systems Science: Methodological Approaches (Advances in Systems Science and Engineering (ASSE)) reserve written by well-known writer who knows well how to make book that could be understand by anyone who have read the book. Written throughout good manner for you, leaking every ideas and composing skill only for eliminate your own hunger then you still doubt Systems Science: Methodological Approaches (Advances in Systems Science and Engineering (ASSE)) as good book not just by the cover but also by content. This is one publication that can break don't ascertain book by its deal with, so do you still needing one more sixth sense to pick this

particular!? Oh come on your studying sixth sense already told you so why you have to listening to another sixth sense.
